

PATENT COOPERATION TREATY

PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

From the INTERNATIONAL BUREAU

To:

Commissioner
 US Department of Commerce
 United States Patent and Trademark
 Office, PCT
 2011 South Clark Place Room
 CP2/5C24
 Arlington, VA 22202
 ETATS-UNIS D'AMERIQUE
 in its capacity as elected Office

Date of mailing (day/month/year) 16 March 2001 (16.03.01)	
International application No. PCT/GB00/02303	Applicant's or agent's file reference P384WO
International filing date (day/month/year) 26 June 2000 (26.06.00)	Priority date (day/month/year) 26 June 1999 (26.06.99)
Applicant AUSTIN, James, Leonard	

1. The designated Office is hereby notified of its election made:

in the demand filed with the International Preliminary Examining Authority on:

22 January 2001 (22.01.01)

in a notice effecting later election filed with the International Bureau on:

2. The election ☒ was

was not

made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland Facsimile No.: (41-22) 740.14.35	Authorized officer Juan Cruz Telephone No.: (41-22) 338.83.38

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference P384W0	FOR FURTHER ACTION see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.	
International application No. PCT/GB 00/ 02303	International filing date (day/month/year) 26/06/2000	(Earliest) Priority Date (day/month/year) 26/06/1999
Applicant UNIVERSITY OF YORK		

This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This International Search Report consists of a total of 2 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report

a. With regard to the **language**, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international search was carried out on the basis of the sequence listing :

☐ contained in the international application in written form.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority in written form.

☐ furnished subsequently to this Authority in computer readable form.

☐ the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

☐ the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished

2. ☐ **Certain claims were found unsearchable** (See Box I).

3. ☐ **Unity of Invention is lacking** (see Box II).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the **drawings** to be published with the abstract is Figure No.

☒ as suggested by the applicant.

☐ because the applicant failed to suggest a figure.

☐ because this figure better characterizes the invention.

4

☐ None of the figures.

WIPO PCT

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference P384WO	FOR FURTHER ACTION See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)	
International application No. PCT/GB00/02303	International filing date (day/month/year) 26/06/2000	Priority date (day/month/year) 26/06/1999
International Patent Classification (IPC) or national classification and IPC G06T1/60		
Applicant UNIVERSITY OF YORK et al.		

1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 7 sheets, including this cover sheet.

☐ This report is also accompanied by ANNEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of sheets.

3. This report contains indications relating to the following items:

- I ☒ Basis of the report
- II ☐ Priority
- III ☒ Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV ☐ Lack of unity of invention
- V ☒ Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI ☐ Certain documents cited
- VII ☒ Certain defects in the international application
- VIII ☐ Certain observations on the international application

Date of submission of the demand 22/01/2001	Date of completion of this report 29.08.2001
Name and mailing address of the international preliminary examining authority:  European Patent Office D-80298 Munich Tel. +49 89 2399 - 0 Tx: 523656 epmu d Fax: +49 89 2399 - 4465	Authorized officer Casteller, M Telephone No. +49 89 2399 2666

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/GB00/02303

I. Basis of the report

1. With regard to the **elements** of the international application (*Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)*):

Description, pages:

1-35 as originally filed

Claims, No.:

1-22 as originally filed

Drawings, sheets:

1/5-5/5 as originally filed

2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- ☐ the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

- ☐ the description, pages:
- ☐ the claims, Nos.:

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/GB00/02303

☐ the drawings, sheets:

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

III. Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

1. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), or to be industrially applicable have not been examined in respect of:

☐ the entire international application.

☒ claims Nos. 15-16, 20-22.

because:

☐ the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (*specify*):

☒ the description, claims or drawings (*indicate particular elements below*) or said claims Nos. 15-16, 20-22 are so unclear that no meaningful opinion could be formed (*specify*):
see separate sheet

☐ the claims, or said claims Nos. are so inadequately supported by the description that no meaningful opinion could be formed.

☐ no international search report has been established for the said claims Nos. .

2. A meaningful international preliminary examination cannot be carried out due to the failure of the nucleotide and/or amino acid sequence listing to comply with the standard provided for in Annex C of the Administrative Instructions:

☐ the written form has not been furnished or does not comply with the standard.

☐ the computer readable form has not been furnished or does not comply with the standard.

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)

	No:	Claims	

2. Citations and explanations
see separate sheet

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:
see separate sheet

Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

1. Present independent claims 15, 16, 21 and 22 and dependent claim 20 contain explicit references to the entire description and at least one drawing. The skilled reader is left in a state of uncertainty as of which described features are meant to be protected by these claims.

These claims therefore not only explicitly contravene Rule 6.2(a) PCT, but are also so vague and broad that it is not even clear (Article 6 PCT) what subject-matter should be the subject of international preliminary examination.

Consequently, no assessment of novelty and inventive step appears possible for these claims.

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

2. Reference is made to the following documents:

D1: US-A-4 958 377 (TAKAHASHI KOUSUKE), 18 September 1990

D2: YANG GUOQING et al.: "Multilayer parallel distributed pattern recognition system model using sparse RAM nets", IEE PROCEEDINGS-E (COMPUTERS AND DIGITAL TECHNIQUES), March 1992, UK, vol. 139, no. 2, pages 144-146, XP002146690, ISSN: 0143-7062

3. D1 describes an associative memory for storing a plurality of characters (strings) and deciding a best match between an input character (string) and those stored.

The associative memory can be divided into a plurality of areas (cf. cases (a), (b) and (c), column 7, lines 2-24) selectively accessed in dependance from (two) selection signals (SC1, SC2, cf. also column 9, lines 19-34). The actual number of areas into which the memory is dynamically divided ultimately depends from the length of the input character (string) (e.g. M, 2M, or 3M, cf. column 8, lines 28-40).

The selection signals themselves are not stored in the memory (column 10, lines 16-

19).

There is no mention in D1 neither of generation of tuples from the input data, nor of using data separators as suggested by the invention.

D2 at least mentions generating n-tuples subpatterns from input patterns for training a memory having n-bit address and 1-bit datum (cf. page 144, paragraph 2). D2 (page 145, paragraph 4) suggests to use a sparse state matrix of k memories (A_i , $i=1, \dots, k$) followed by a classification matrix (C). Each memory is addressed by a n-bit tuple formed from the input vector and outputs an m-bit word. Collectively, the output from the k memories forms a (kxm)-bit vector S, which is in turn used to access rows of the g-column classification matrix, each column corresponding to a discriminator which has been trained individually. The decision output vector d is formed by bitwise accumulating (i.e. summing) all selected locations in each discriminator. An unknown input pattern is classified as belonging to the discriminator with maximum response. It therefore appears that D1 represents background prior art further away from the invention than D2. However, D2 itself at best only suggests generating a set of tuples from the input pattern (e.g. by means of the sampler of paragraph c) of claim 1). Other elements of the invention are not derivable from D2.

4. The invention as recited in independent claims 1 and 17 consists in a correlation matrix used to store and recognize alphanumeric patterns. The matrix is accessed using combined coded tuples as row (column) addresses, unique separators as column (row) addresses.

Said combined coded tuples are binary vectors obtained by assigning a binary code to each character (cf. fig. 2(a)), selecting groups of n characters (e.g. 2 or preferably 3) covering the input pattern (by means of a n-character-wide window sliding one character at a time along the input pattern), generating for each group the binary tensor product of the character codes, and combining (i.e. ORing) all the binary tensor products obtained for the given input pattern.

It is important to note that each combined coded tuple does not address a single row (column) but in fact a plurality of rows (i.e. all those having a bit set to "1" in the tuple, there being a one-to-one correspondence between rows and bits in the tuple).

Said unique separators are generated pseudo-randomly (various strategies for optimising said pseudo-random generation are described at length in the application) as binary patterns, each uniquely (i.e. biunivocally) associated to its respective input pattern.

Since both said combined coded tuples and said unique separators are used to store the initial data(base) into the correlation matrix, it can be said that an association between each unique separator and its respective input pattern is thereby created /stored (cf. e.g. paragraph g) of claim 1).

When an unknown input pattern (or a part thereof) is provided and transformed into a combined coded tuple as above outlined, it is used as a row (column) address, the stored content of the addressed rows (columns) is summed for all columns (rows), to give an indication of the combined separators that may match the unknown input pattern.

Consequently, the subject-matter set out in the present independent claims 1 and 17, as well as their dependent claims 2-14, 18 and 19, is considered to be novel and non-obvious with respect to the disclosures of the available prior art. It is also evident that the invention is industrially applicable.

The requirements of paragraphs (1) to (4) of Article 33 PCT are thus met.

Re Item VII

Certain defects in the international application

5. The last two pages of the description should have been deleted as they add nothing to the disclosure and could, in fact, render the extent of protection uncertain, Article 6 PCT.

The second paragraph of page 34, referring to other unspecified documents, appears to be neither relevant, nor necessary (Rule 9.1(iv) PCT) and should have been deleted.

[Continued on next page]

(54) Title: DATA PROCESSORS ✓

(57) Abstract: Input means (10) receives sets of input data to be stored in a correlation matrix memory (6). A sampler (2) derives, from each set of input data, a respective set of tuples, and a coder (4) codes each of the tuples, which are then combined for the respective set of input data. A separator generator (9) generates for each set of input data a respective, associated, unique separator, which is stored with its respective set of input data. Addressing means applies to the correlation matrix memory, for each set of input data, the respective combined coded tuples as a row address and the respective unique separator as a column address, or vice-versa.

PATENT COOPERATION TREATY

PCT

NOTICE INFORMING THE APPLICANT OF THE
COMMUNICATION OF THE INTERNATIONAL
APPLICATION TO THE DESIGNATED OFFICES

(PCT Rule 47.1(c), first sentence)

From the INTERNATIONAL BUREAU

To:

STANLEY, David, William
Stanleys
Kings Court
12 King Street
Leeds, Yorkshire LS1 2HL
ROYAUME-UNI

Date of mailing (day/month/year) 04 January 2001 (04.01.01)		IMPORTANT NOTICE	
Applicant's or agent's file reference P384WO			
International application No. PCT/GB00/02303	International filing date (day/month/year) 26 June 2000 (26.06.00)	Priority date (day/month/year) 26 June 1999 (26.06.99)	
Applicant UNIVERSITY OF YORK et al			

1. Notice is hereby given that the International Bureau has communicated, as provided in Article 20, the international application to the following designated Offices on the date indicated above as the date of mailing of this Notice:
AG,AU,BZ,DZ,KP,KR,MZ,US

In accordance with Rule 47.1(c), third sentence, those Offices will accept the present Notice as conclusive evidence that the communication of the international application has duly taken place on the date of mailing indicated above and no copy of the international application is required to be furnished by the applicant to the designated Office(s).

2. The following designated Offices have waived the requirement for such a communication at this time:
AE,AL,AM,AP,AT,AZ,BA,BB,BG,BR,BY,CA,CH,CN,CR,CU,CZ,DE,DK,DM,EA,EE,EP,ES,FI,GB,GD,
GE,GH,GM,HR,HU,ID,IL,IN,IS,JP,KE,KG,KZ,LC,LK,LR,LS,LT,LU,LV,MA,MD,MG,MK,MN,MW,MX,
NO,NZ,OA,PL,PT,RO,RU,SD,SE,SG,SI,SK,SL,TJ,TM,TR,TT,TZ,UA,UG,UZ,VN,YU,ZA,ZW
The communication will be made to those Offices only upon their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1(a-bis)).

3. Enclosed with this Notice is a copy of the international application as published by the International Bureau on
04 January 2001 (04.01.01) under No. WO 01/01345

REMINDER REGARDING CHAPTER II (Article 31(2)(a) and Rule 54.2)

If the applicant wishes to postpone entry into the national phase until 30 months (or later in some Offices) from the priority date, a demand for international preliminary examination must be filed with the competent International Preliminary Examining Authority before the expiration of 19 months from the priority date.

It is the applicant's sole responsibility to monitor the 19-month time limit.

Note that only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary examination.

REMINDER REGARDING ENTRY INTO THE NATIONAL PHASE (Article 22 or 39(1))

If the applicant wishes to proceed with the international application in the national phase, he must, within 20 months or 30 months, or later in some Offices, perform the acts referred to therein before each designated or elected Office.

For further important information on the time limits and acts to be performed for entering the national phase, see the Annex to Form PCT/IB/301 (Notification of Receipt of Record Copy) and Volume II of the PCT Applicant's Guide.
